

I have Cingular service and I would like to make a complaint. For the last 4 months people have been trying to call my wireless phone and getting an "all circuits are busy." I contacted Cingular several times, at first they told me there was nothing wrong. My next attempt they told me they were working on the issue and it should be cleared up in a few days(three months ago." My recent call they told me that they added to many customers to fast in the nassau are of New York and that there was nothing that they could do. I asked them if could cancel service and they said i would owe the etf for both of my lines. Eight out of Eleven calls come up with that signal all the time. I tried to resolve this issue with them several times and they tell me everyone is having this issue that has 516 exchange. I dont think that this is fare. For them to tell me that there is nothing they can do and still hold me responsibe for the earliiy term fee is not right
